SWITCH and WIRING ASSEMBLY IDENTIFICATION CHART

The following chart will provide quick identification of the Service Part Number when the identification marking is known. Following this guide chart, Service Part Numbers are listed by Model, Year and Vehicle usage, which will permit the selection of replacement switch and wiring when the identification marking number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

14300 CABLE ASSY. - BATTERY UNIVERSAL TYPE

Battery cable terminals (battery end) are universal and may be used on either the positive or negative battery post. Battery cable length is determined by distance between hole centers.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

WIRING LOOM MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE FOR 1965 and SUBSEQUENT MODELS

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Loom Markings or Tag Numbers for 1965 and subsequent model vehicles. For many vehicles the Service Wiring Part Number will be the same as the Loom Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Loom Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the loom identification marking or tag number is not known.

17260 CABLE ASSY. - SPEEDOMETER

There are two ways of selecting Speedometer Cables:
(1) By Identification
(2) By Model Application

By IDENTIFICATION:
When the Identification Number of the speedometer cable is known:

1. Refer to Identification Chart below.
2. Find the Identification Number and the corresponding Service Number.

By MODEL APPLICATION:

1. Refer to Model Application Chart beginning on page 10.
2. Refer to appropriate Model, Year and Transmission to find Service Part Number.

17271 SPEEDOMETER GEARS - DRIVE and/or DRIVEN

HOW TO FIND SPEEDOMETER DRIVE and DRIVEN GEAR PART NUMBERS

There are two ways of determining the part number of a speedometer drive or driven gear.

BY IDENTIFICATION or BY APPLICATION

BY IDENTIFICATION

YOU MUST KNOW: Physical shape
Material
Color
Number of teeth
Size (17285 only)
Identification number - if applicable (17271 only)

EXAMPLE:

DRIVEN GEAR (17271)

Physical shape conforms to -
TYPE: 3A
MATERIAL: Nylon
COLOR: Green or White
NUMBER of TEETH: 17
PART NUMBER listed is: C3DZ 17271-B

DRIVE GEAR (17285)

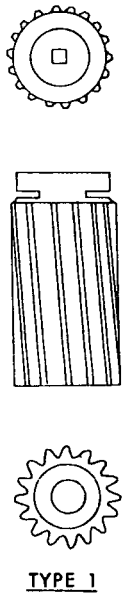
Physical shape conforms to -
TYPE: 4A
MATERIAL: Nylon
COLOR: Yellow
NUMBER of TEETH: 7
SIZE: 1 3/8" I.D. x 2 1/64" O.D. x 11/16" thick or long
PART NUMBER listed is: C8AZ 17285-A

BY APPLICATION

YOU MUST KNOW: Year
Rear Axle Ratio
Engine
Transmission
Tire Size

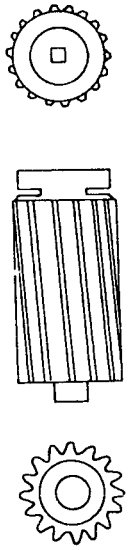
For convenience the model years are arranged in separate sections as follows:

1965	172.65
1966	172.66
1967	172.67
1968	172.68
1969	172.69
1970	172.70
1971	172.71
1972	172.72



EXAMPLE:

YEAR:	1970
REAR AXLE RATIO:	3.25 to 1
ENGINE:	8 cyl. 390 C.I.D.
TRANSMISSION:	3 speed manual (3/M/T)
TIRE SIZE:	8.25 x 15



DRIVEN GEAR part number listed is C8AZ 17285-A

DRIVE GEAR part number listed is C3DZ 17271-B (for both regular vehicles and Police, Taxi and Rental vehicles).

18124-5 SHOCK ABSORBER IDENTIFICATION CHART

The production number is stamped on the barrel of each shock absorber as an identification marking. The following chart will provide quick identification of the service kit number when the identification marking is known. Also shock absorber kits may be selected by model, year and description under group number 18124-5 which follows the chart. Shock absorber kits include insulators, bolts, nuts and washers.

In those instances where both Ford and Motorcraft numbers are listed, Canadian dealers are to order Motorcraft numbers only.

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS

To simplify part number determination and complexity, and to reduce look-up time for air conditioning hoses the following summary describes the various service methods:

1. Hose originally used in production is serviced.

Example: Original production part number D1ZA 19835-AB is supplied for service as part number D1FZ 19835-B as shown on page 16 of the IDENTIFICATION CHART and on page 10 of the APPLICATION CHART.

2. Hose originally used in production is replaced by a "Simplified" hose.

Example: Original production part numbers C8OA 19835-D and C8OA 19837-E (combined) are replaced by a single "Simplified" hose part number C8OZ 19837-A as shown on page 15 of the IDENTIFICATION CHART and on page 8 of the APPLICATION CHART.

3. Hose originally used in production is not supplied for service and has been replaced by detail parts i.e. bulk hose (which must be cut to length) and assorted fittings.

Detail parts include:
Push-on type tube fittings (includes clamps and "o" rings) and bulk hose. Original production hose assemblies are fabricated from bulk hose (cut to length indicated) and add necessary fittings (listed by code number and cross-referenced to part number on pages 24 through 26.

Example: Original production part number D2AA 19972-AA is replaced by 41 inches of 13/32 I.D. bulk hose (part number D2AZ 19C708-B) and one each of fitting code H44 which cross-references to fitting service part number D2AZ 19D695-AF and fitting code S04 which cross-references to fitting service part number D2AZ 19D695-BE. The original production part number D2AA 19972-AA is shown on page 19 of the IDENTIFICATION CHART and on page 7 of the APPLICATION CHART. The fitting code number to part number CROSS-REFERENCE CHART is shown on pages 24 through 26.

Air Conditioning hose information is listed as follows:

	PAGE
INSTALLATION INSTRUCTIONS	2 through 5
APPLICATION CHART	6 through 13
IDENTIFICATION CHART	14 through 19
FITTING CROSS-REFERENCE CHART	20 through 26

More detailed instructions are included with the IDENTIFICATION CHART, APPLICATION CHART and FITTING CROSS-REFERENCE CHART.

INSTALLATION INSTRUCTIONS

HOSE GUARDS

FOAM RUBBER SLEEVE: To protect 5/8" rubber air conditioner hose from direct rubbing against other parts and to reduce hose vibration noise.

ALUMINUM SLEEVE: To protect 13/32" discharge hose where hose contacts sharp edges in routing through the radiator side support.

1. Slide sleeve on hose before installing end fittings.
   NOTE: Sleeve can be cut lengthwise and formed around other hose sizes.

2. Use C0AZ 19552-A or 8A 19552-B adhesive to secure sleeve in desired position.

INSTALLATION INSTRUCTIONS - continued

DETAIL PARTS and HOSE ASSEMBLIES

1. Note defective hose routing before removal.

2. Repair existing rubber or nylon hose on vehicle if feasible.

   a. Repair cuts and similar failures, in otherwise sound existing hose assemblies, by using one push-on hose splicer or two splicers with the required length of bulk hose.

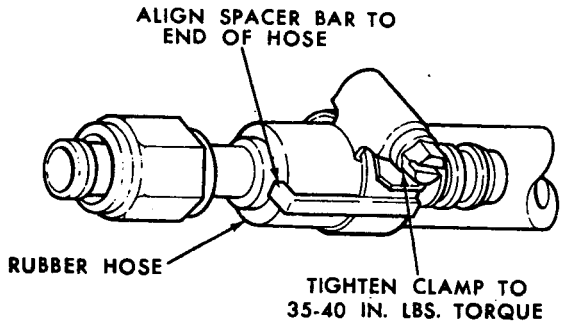
   b. Repair accumulator hose assemblies (Suction Line - Group Number 19C836) starting in 1970 on some models with integral A/C), by cutting the existing hose (6) inches from one or both coupled ends of the accumulator can, and splicing on the required bulk rubber hose and component fittings to replace the defective hose end.

      If the accumulator can is damaged, or if the existing hose is judged unsound, the entire accumulator assembly must be replaced with component parts.

3. Remove defective hose if splicing is not acceptable.

   a. Discharge the system if not completely discharged, following the procedure outlined in the shop manual.

   b. For those liquid lines (5/16" I.D.) having a self-sealing, quick disconnect coupling on one end, the coupling should be left on the vehicle. The new hose assembly will adapt into this coupling with 1/2"-20 male thread and an external o-ring seal.



4. Assemble the new hose as shown below if component parts are used.

   a. Select proper end fittings, splicers, hose guards, and hose size required to replace the original hose assembly. A visual comparison is required for applications not listed.

   b. Cut hose to required length. Keep ends square and remove loose fragments.

   c. Lubricate barbed end of fittings and splicers with a few drops of clean refrigerant oil.

   d. Slide loose clamps on hose, force fittings into hose (by hand) with rotating motion.

      CAUTION. Do not go past shoulder or scratch fitting with tools, this fitting must be inserted by hand.

   e. Position clamp so that spacer tab is over end of rubber hose and tighten until clamp starts to cut hose. (Tighten to 35-40 in. lbs. torque)

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS - continued

INSTALLATION INSTRUCTIONS - continued

DETAIL PARTS and HOSE ASSEMBLIES - continued

f. For nylon hose splicers only, position clamp approx. 1/8" from end of hose (tighten to 40-45 in. lbs. torque)

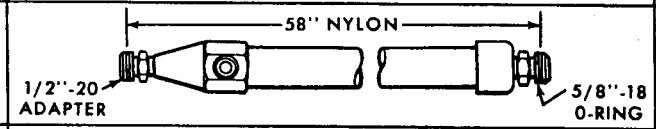
5. Route the new hose, using the original installation as a guide.
If simplified hose with aluminum tubing and splicer is used, bend the tubing as outlined below:

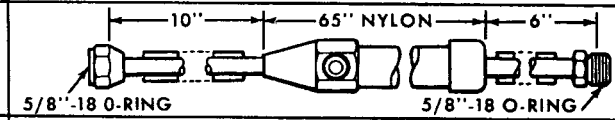
a. Bend the aluminum tubing by hand to replace the bends of the original hose, making the bends as simple as possible.

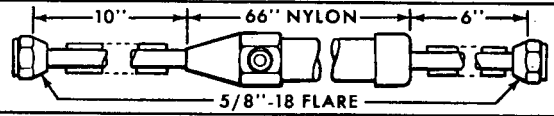
b. Drill new holes through the radiator support and side shield as required to make the installations using simplified tube bends.

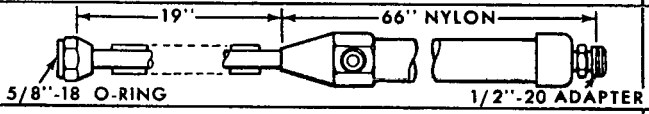
6. Install and torque new hose assembly.
NOTE. When installing assembly, tighten coupling nut finger tight, then torque per chart below using a back-up tube wrench. Further tightening may distort fitting and result in an imperfect seal. Be sure that o-ring is in place on o-ring type fittings. Hoses must be installed with no twist in them.

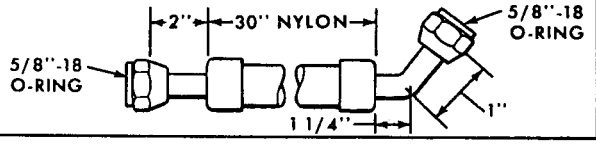
Fitting Size or Description	Thread Size	RECOMMENDED TORQUE (IN FT. LBS.) O-Ring Type	Flare Type
3/8"	5/8"-18	11-13	15-19
1/2"	3/4"-16 or 18	15-20	21-27
5/8"	7/8"-14 or 18	21-27	25-31
3/4"	1 1/16"-14 or 18	28-33	33-40
Adapter for Self-sealing Coupling	1/2"-20 7/8"-20	8-12 21-27	
Compressor fitting and service valve	1"-14	20-40	
Block fitting plate bolt		20-30	
Pressure relief valve (into block fitting)	3/8"-24	4-11	

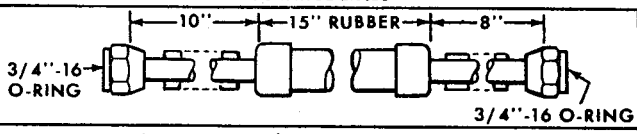


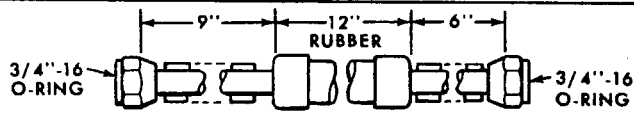


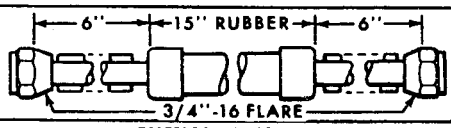


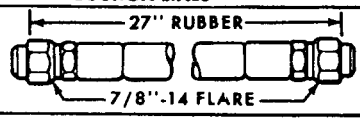


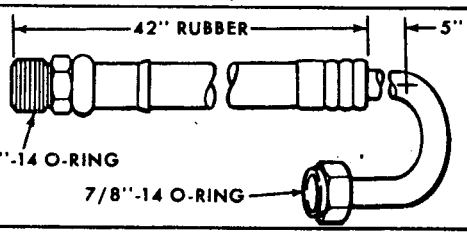












7. Rework the existing hose support clamps if required.

a. Check for correct installation and proper routing for clearance with other vehicle components.

b. Evacuate, charge and leak test the system following the procedure outlined in the vehicle shop manual.

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS - continued

APPLICATION CHART

To determine the correct hose part number or detail part numbers you must know:

1. Carline-Ford (A), Torino (B), etc.
2. Year (1970, 1971, etc.)
3. Hose function (Discharge Line, Liquid Line or Suction Line)
4. Type of Air Conditioning System (Hang-on or Integral)
5. Engine (number of cylinders and cubic inch displacement)

Example No. 1. If a Discharge Line is required for a 1971 Thunderbird (S) with integral air conditioning the Application Chart (page 12) indicates (1) that the hose assembly is serviced as either part number D0SZ 19972-A (original production hose) or part number C8OZ 19972-A (simplified hose) and (2) that the hose may be fabricated from 16" of 13/32" I.D. bulk hose (Part Number D2AZ 19C708-B, one piece of Fitting Code G44 (Part Number D2AZ 19D695-AA) and one piece of Fitting Code H44 (Part Number D2AZ 19D695-AF).

Example No. 2. If a Liquid Line is required for a 1969 Fairlane/Torino (B) with integral air conditioning the Application Chart (on page 8) indicates (1) that the original production hose assembly is not serviced (★) and (2) that you may use C8OZ 19837-A (simplified hose) and (3) the hose may be fabricated from - 60" of 5/16" I.D. bulk hose (Part Number D2AZ 19C708-B), one piece of Fitting Code H33 (Part Number D2AZ 19D695-AE), one piece of Fitting Code L33 (Part Number D2AZ 19D695-R), and one piece of Fitting Code SG3 (Part Number D2AZ 19D695-BK).

Example No. 3. If a Suction Line is required for a 1970 Ford(A) with hang-on air conditioning the Application Chart (on page 7) indicates (1) that the hose assembly is not serviced (★) and (2) that you must fabricate the hose from 51" of 1/2" I.D. bulk hose (Part Number D2AZ 19C708-B), one piece of Fitting Code A45 (Part Number D2AZ 19D695-L) and one piece of Fitting Code CL6 (Part Number D0TZ 19B679-A) and one piece of Fitting Code S5 (Part Number D0TZ 19752-A).

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS - continued

IDENTIFICATION CHART

To determine the correct hose part number or detail part numbers you must either:

1. Know the identification number from the existing hose.

or

2. Visually identify the existing hose and select appropriate details from the Fitting Cross-Reference Chart shown on pages 20 through 26.

Example No. 1. If the identification number is D2OA 19972-CB, the Identification Chart (on Page 19) indicates (1) that the service assembly number is D2OZ 19972-B and (2) that the hose may be fabricated from 18" of 13/32" I.D. bulk hose (part number D2AZ 19C708-B), one piece of Fitting Code P44 (part number D2AZ 19D695-BC) and one piece of Fitting Code S04 (part number D2AZ 19D695-BE.

Example No. 2. If the combined identification numbers are D1ZA 19835-AB and D1ZA 19837-AD the Identification Chart (on page 16) indicates (1) that the service assembly (for the combined hoses) is C8OZ 19837-A and (2) that the combined hoses may be fabricated from - 78" of 5/16" I.D. bulk hose (part number D2AZ 19C708-A), one piece of Fitting Code H33 (part number D2AZ 19D695-AE), one piece of Fitting Code L33 (part number D2AZ 19D695-R) and one piece of Fitting Code SG3 (part number D2AZ 19D695-BK).

Example No. 3. If the combined identification numbers are (C7AA 19835-A and C9OJ 19837-A the Identification Chart (on page 15) indicates the hose assembly is not serviced (★) and that the entire combined hoses must be fabricated from - 67" of 5/16" I.D. bulk hose (part number D2AZ 19C708-A), two pieces of Fitting Code A33 (part number D2AZ 19D695-D), and one piece of Fitting Code SG3 (part number D2AZ 19D695-BK).

FITTING CROSS-REFERENCE CHART

There are three ways of selecting hose and fitting part numbers.

1. From Code Number (shown in the Identification or Application Charts) to the Part Number listed below.

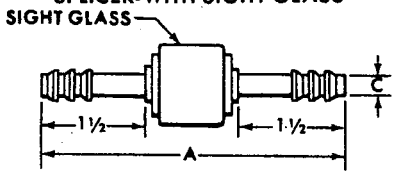
2. From a visual inspection of the existing hose and selection of appropriate details using the following instructions:

   a. Determine Fitting Size.
   Diameter of tube at a point behind the nut indicates fitting size, e.g. 3/8", 1/2", 5/8" or 3/4".

   Select Fittings and Splicers from the illustrations and text that follows. The necessary clamps and o-rings are included with all Fittings and Splicers and are also supplied for service as separate parts.

3. The alphabetical characters of the fitting code number can be used for physical identification by referring to the illustrated fittings shown by type on pages 21 thru 23.
   Examples

(A)44 (part number D2AZ 19D695-E)
Shown on page 21



(5G)3 (Part number D2AZ 19D695-BK)
Shown on page 22

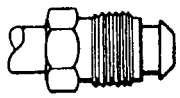
SPLICER-WITH SIGHT GLASS

(TYPE SG)

FITTINGS

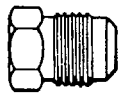
Determine Fitting size from the information shown below:

ORIGINAL TUBE O.D.	FRACTIONAL FITTING SIZE	INDUSTRY SIZE NO.	THREAD SIZE: SAE 45° FLARE O-RING (FEMALE) O-RING (MALE FLARE)	THREAD SIZE: O-RING (MALE SWIVEL)
5/16"	3/8"	6	5/8"-18	5/8"-18
13/32"	1/2"	8	3/4"-16	3/4"-18
1/2"	5/8"	10	7/8"-14	7/8"-18
5/8"	3/4"	12	1 1/16"-14	1 1/16"-16



b. Determine Hose Size.
Measure end of tube (not barbs). The tube O.D. matches the I.D. of the required hose.
e.g. tube O.D. is 5/16" and hose I.D. is 5/16" (size No. 6, part number D2AZ 19C708-A).

BULK RUBBER HOSE



Select the appropriate Hose from the sizes listed below:

ORIGINAL TUBE O.D.	REPLACEMENT HOSE I.D.	INDUSTRY SIZE NO.	PART NUMBER	MOTORCRAFT NUMBER
5/16"	5/16"	6	D2AZ 19C708-A(15')	*YF-248
			D4AZ 19C708-A(50')	*YF-599
13/32"	13/32"	8	D2AZ 19C708-B(15')	*YF-249
			D4AZ 19C708-B(50')	*YF-600
1/2"	1/2"	10	D2AZ 19C708-C(15')	*YF-250
			D4AZ 19C708-C(50')	*YF-601
5/8"	5/8"	12	D2AZ 19C708-D(15')	*YF-251
			D4AZ 19C708-D(50')	*YF-602

BODY BOLT CHART

HOW TO FIND BODY BOLTS and RELATED PARTS

1) To determine Body Bolts and Related Parts you must know:

   a) YEAR
   b) CAR LINE
   c) BODY TYPE
   d) BODY BOLT LOCATION
   e) NAME OF PART

2) Using this information and the typical illustration shown on page 12, refer to the listing beginning on page 13.

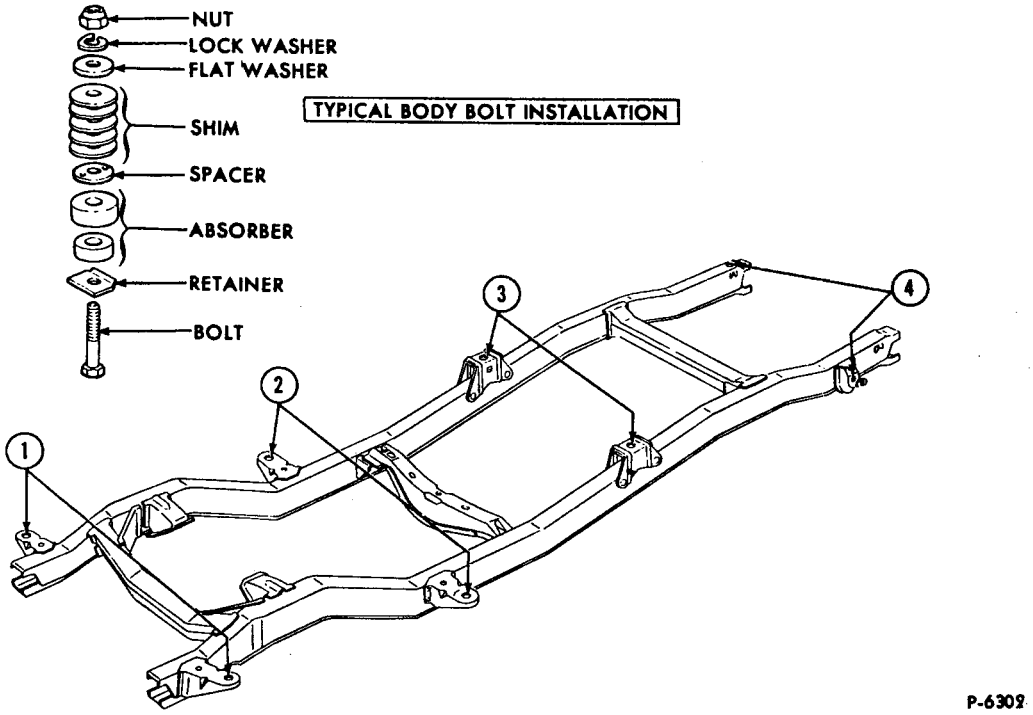
3) Locate the appropriate Code Number for Bolts, Nuts, Retainers etc.

4) Translate the Code Number into a Service Part Number by referring to the Cross Reference listing on page 21.

   Read down to locate Code Number.

   Read across to locate Service Part Number.

EXAMPLE:



a) Year	1967
b) Car Line	FORD
c) Body Type	71
d) Body Bolt Location	Number 9
e) Name of Part	Absorber, Bolt, Flat washer, Lockwasher, Retainer, Shim and Spacer

Code Numbers listed are:	Part numbers shown for these Codes are:
Absorber ---62	C5AZ 5B098-B
Bolt ---52	★379515-S2
Flat washer---44	★375301-S
Lockwasher---13	34848-S8(X75)
Retainer ---96	C5AZ 6200157-B
Shim ---97	C3AZ 6200163-A
Spacer ---★	Not serviced
